For anyone approaching Discourse Analysis for the first time, theory means little when it is not related to actual knowledge and experience of language in use. Describing Discourse takes the unique approach of introducing discourse studies through the hands-on analysis of linguistic data. The book introduces students to specific discourses constructed for particular purposes, for example, from the domains of advertising, law, medicine and education. Each chapter provides examples, exercises and commentary designed to develop the analytical abilities needed in describing the characteristic forms and typical functions of different discourses. Describing Discourse provides the ideal entry into the study of discourse for students new to the subject.

The equation-based presentation of the theory behind vehicle dynamics enables readers to develop a thorough understanding of the key attribute to both a vehicle's driveability and its active safety. Supported by MATLAB tools, the key areas that affect vehicle dynamics are explored including tire mechanics, the steering system, vehicle roll, traction and braking, 4WS and vehicle dynamics, vehicle dynamics by vehicle and human control, and controllability.
