RRT and conservative management - NICE

A fluid restriction is used as a way to avoid overloading your heart if you have heart failure, as more fluid in your bloodstream makes it harder for your heart to pump. For the same reason, your doctor may prescribe a medicine known as a diuretic, or water tablet, to help get rid of excess fluid. Your doctor may advise you to stop taking it in hot weather, when you have no fluid retention or when your blood pressure gets too low.

Fluid restriction for heart failure - what should I do in ...

You can help yourself and the renal unit team by controlling the amount of fluid you drink. Click on the man to find out why. One of the main functions of the kidney is to balance fluid in the body and with kidney failure, the commonest problem is being able to get rid of excess water. Excess water in the body is called fluid overload.
