The brilliantly told and gripping story of the most familiar - yet, amazingly, still poorly understood - substance in the universe: Water. The extent to which water remains a scientific mystery is extraordinary, despite its prevalence and central importance on Earth. Whether one considers its role in biology, its place in the physical world (where it refuses to obey the usual rules of liquids) or its deceptively simple structure, there is still no complete answer to the question: what is water? Philip Ball's book explains what, exactly, we do and do not know about the strange character of this most essential and ubiquitous of substances. H₂O begins by transporting its readers back to the Big Bang and the formation of galaxies to witness the birth of water's constituent elements: hydrogen and oxygen. It then explains how the primeval oceans were formed four billion years ago; where water is to be found on other planets; why ice floats when most solids sink; why, despite being highly corrosive, water is good for us; why there are at least fifteen kinds of ice and perhaps two kinds of liquid water; how scientists have consistently misunderstood water for centuries; and why wars have been waged over it. Philip Ball's gloriously offbeat and intelligent book conducts us on a journey through the history of science, folklore, the wilder scientific fringes, cutting-edge physics, biology and ecology, to give a fascinating new perspective on life and the substance that sustains it. After reading this book, drinking a glass of water will never be the same again.

In all but the smallest of projects the project sponsor inevitably has to buy in the goods and services of other suppliers. This requires people to make contracts so that they know the basis on which they are working with each other and to deal with any disagreements that subsequently arise. So a knowledge of contracting specifically for project management is essential if a project is to avoid difficulties and reach a successful conclusion. This book concentrates specifically on the contracting issues that surround projects of any size.

In Expectations Unfulfilled scholars from Argentina, Belgium, Brazil, Mexico, Norway, Spain and Sweden study the experiences of Norwegian migrants in Latin America between the Wars of Independence and World War II.

Language is a tool used to express thoughts, to hide thoughts or to hide lack of thoughts. It is often a means of domination. The question is who has the power to define the world around us. This book demonstrates how language is being manipulated to form the minds of listeners or readers. Innocent words may be used to conceal a reality which people would have reacted to had the phenomena been described in a straightforward manner. The nice and innocent concept "cost sharing", which leads our thoughts to communal sharing and solidarity, may actually imply privatization. The false belief that the best way to learn a foreign language is to have it as a language of instruction actually becomes a strategy for stupidification of African pupils. In this book 33 independent experts from 16 countries in the North and the South show how language may be used to legitimize war-making, promote Northern interests in the field of development and retain colonial speech as languages of instruction, languages of the courts and in politics. The book has been edited by two Norwegians: Birgit Brock-Utne is a professor at the University of Oslo and a consultant in education and development. From 1987 until 1992 she was a professor at the University of Dar es Salaam. Gunnar Garbo, author and journalist and former member of the Norwegian Parliament, was the Norwegian Ambassador to Tanzania from 1987 to 1992.

Information technology affects all aspects of modern life. From the information shared on social media such as Facebook, Twitter, and Instagram to online shopping and mobile devices, it is rare that a person is not touched by some form of IT every day. Information Technology Law examines the legal dimensions of these everyday interactions with technology and the impact on privacy and data protection, as well as their relationship to other areas of substantive law, including intellectual property and criminal proceedings. Focusing primarily on developments within the UK and EU, this book provides a broad-ranging introduction and analysis of the increasingly complex relationship between the law and IT. Information Technology Law is essential reading for students of IT law and also appropriate for business and management students, as well as IT and legal professionals. Online resources The accompanying online resources include a catalogue of web links to key readings and updates to the law since publication.

Workplace Health Promotion - A salutogenic approach. A strategy for the future of business. When company performance and economic sustainability depends on peoples participation, wellbeing and health. Read about how workplace health promotion contributes to this with a salutogenic approach. "This book takes the Ottawa Charter for Health Promotion one step further" Salutogenesis Antonovsky helped us to understand the logic of health promotion by means of the continuum model which describes human health as something dynamic with movement and direction. From a given point on the health continuum (the line between the twin poles of health and illness), different conditions or measures can act to improve the individual's health so that he or she is moved nearer towards the health pole. This state of

health can be superior, both when measured in physiological terms and when considered subjectively in terms of the feeling of health experienced. What is there in people's way of life or in them as persons, which functions as a general factor of resistance to illness? What can be done not only to see that health is preserved but that it can even be improved? With the help of the idea of salutogenesis, this strategy can be developed into an approach of its own which clearly differs from both curative and preventive health work.

An illustrated guide to Viking warfare from strategy and weapons to culture and tradition: “ a very excellent introduction to the Viking age as a whole ” (Justin Pollard, historical consultant for the Amazon television series Vikings). From the time when sailing was first introduced to Scandinavia, Vikings reached virtually every corner of Europe and even America with their raids and conquests. Wherever Viking ships roamed, enormous suffering followed in their wake, but the encounters between cultures also brought immense change to both European and Nordic societies. In Vikings at War, historian Kim Hjarðar presents a comprehensive overview of Viking weapons technology, military traditions and tactics, offensive and defensive strategies, fortifications, ships, and command structure. The most crucial element of the Viking ’ s success was their strategy of arriving by sea, attacking with great force, and withdrawing quickly. In their militarized society, honor was everything, and ruining one ’ s posthumous reputation was considered worse than death itself. Vikings at War features more than 380 color illustrations, including beautiful reconstruction drawings, maps, cross-section drawings of ships, line-drawings of fortifications, battle plan reconstructions, and photos of surviving artifacts, including weapons and jewelry. Winner of Norway ’ s Saga Prize, Vikings at War is now available in English with this new translation. “ A magnificent piece of work [that] I ’ d recommend to anyone with an interest in the Viking period. ” —Justin Pollard, historical consultant for the Amazon television series Vikings

This book addresses current and emerging challenges facing those working in offshore construction, design and research. Keynote papers from leading industry practitioners and academics provide a comprehensive overview of central topics covering deepwater anchoring, pipelines, foundation solutions for offshore wind turbines, site investigation, geohazards and emerging Australian frontiers. A further 125 peer reviewed papers introduce and analyse the critical challenges of offshore geotechnical engineering in the areas of the keynote subjects as well as piling, caissons and shallow foundation systems. The papers collected in these proceedings report a variety of numerical and theoretical investigations, experimental programs and field experience, with established design methods discussed alongside state-of-the-art practices.

This book presents studies from different academic fields of theoretical issues raised by public discourse, focusing on understanding and evaluating how its many manifestations both reflect, shape, and challenge the society it is a part of. The book also presents analyses of examples from around the world of civic communication, ranging from public hearings about same-sex marriage over polemical letters to the editor to public displays of knitting as a protest form.
