If you add a "specific rule" to a relation, you get a function. A function is a set of ordered pairs in which each x -element has only ONE y -element associated with it. While a function may NOT have two y -values assigned to the same x -value, it may have two x -values assigned to the same y -value.

Ah Bach Mathbits Answers

A function is a specific relation, and determining whether a relation is a function is a skill necessary for knowing what we can graph. Determining whether a relation is a function involves making sure that for every input there is only one output. How To Determine If A Relation Is A Function? A function is a correspondence between a first set, called the domain, and a second set, called the range, such that each member of the domain corresponds to exactly one member of the range.
