Rudolf Steiner's anthroposophical medicine, highly regarded and widely practiced in Europe, integrates allopathic medical practices with alternative remedies, including dietary and nutritional therapies, massage, hydrotherapy, art therapy, and counseling. It recognizes that health and illness are directly related to our states of consciousness, and it views illness as an opportunity to create a new state of physical, emotional, and spiritual balance. Modern medicine tends to consider only the material aspect of human beings, an approach that fails to bring the individual to a state of complete wellness. Steiner's holistic view of humanity-beings composed of body, soul, and spirit-takes into consideration the seven-year cycles of human development, the influence of education on health, the relationship between psychological symptoms and physical conditions, the problem of cancer, the four cardinal organs, heredity, and the spiritual balance that

characterizes true health. New, revised edition of Anthroposophical Medicine.

This book is designed to meet the needs of nurse practitioners, advanced practice nurses and also physician assistants, working in urology. The full range of domains of practice is covered, including assessment and diagnosis, clinical management, nurse practitioner and patient relationships, consultation, health promotion and disease prevention, and practice management and research. Some background knowledge is assumed regarding the normal anatomy and physiology of the genitourinary system and the pathophysiology underlying specific urologic health-related problems. The Nurse Practitioner in Urology will be invaluable in ensuring that the nurse practitioner is able to maintain exemplary management of patients with acute and chronic urologic conditions in a wide variety of settings, including independent practices, hospitals, and academic urologic practices. It explains fully the role of the nurse practitioner as a skilled clinician in urology, blending nursing and medical management and capable of managing many chronic nonoperative urologic conditions while recognizing those conditions which may benefit from surgical management. As populations continue to age worldwide, there is no doubt that the provision of advanced urologic care by nurse practitioners is an area that will continue to expand, benefiting from additional training and expertise.
