The purpose of this book is to help you learn proper phlebotomy and EKG procedures and understand the whys of phlebotomy procedures. Many times, as a patient, I have observed phlebotomy techniques, and I would ask the phlebotomist, “What is the reason for drawing the tubes in that order?” I would get either no reply or “I’m not sure.” Now don’t get me wrong. I have met many technicians who have great skills, but some cannot explain the most important question—why? If you were asked to eat fish once a week, and you ask why, and the only answer you get is because it’s good for you, well, I’m sorry but where is the why? In the same vein here, why do you draw the tubes in a certain order? When using my book, you will also be able to link onto my website as an interactive guide. So what are we waiting for? Let’s begin.

Our nervous system must process vast amounts of information each second, information that comes from all parts of the body. Then nerve signals are sent out in response to those inputs. If this sounds simple, rest assured, it is not. It is all quite extraordinary! As with all things in our fallen cursed world, things do go wrong. We will explore the problems that occur when the nervous system is damaged by disease or injury. When you see the incredible complexity of the nervous system, you will realize that our bodies cannot be the result of chemical accidents occurring over millions of years. The human body is the greatest creation of an all-knowing Master Designer! In *The Nervous System*, you will learn about: How nerve signals are generated throughout the body, and how these nerve signals are transmitted to and from the brain The structure of the brain and how it processes input from the body Our senses: sight, hearing, taste, and others!

From the big bang, to the origin and evolution of intelligent life in a search for the meaning of human existence, *Why are We Here?*, by author Bruce Brodie, offers a look at evolution and the future of life on the planet. Through many years of research and study, Brodie addresses a host of questions: • How did chemistry come to life? • How did the release of oxygen by cyanobacteria change the natural history of life? • How did mass extinctions reset the clock and reshape the course of biological evolution? • Why are homo sapiens so dominant? • Why do humans build vast civilizations, while chimps, with whom we share more than 98 percent of our DNA, are confined to forests and experimental laboratories and zoos? • How will cultural and technological evolution, which have transcended the slow pace of biological evolution, shape the future of life on the planet? • Can we escape the many existential threats that hover over us? *Why are We Here?* offers a new perspective on how we think about the world, and our place and our purpose in the universe and the future of humanity. It presents a lasting sense of the amazing wonder and mystery of life.
